## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 17-32 are allowed.

In regard to claims 17 and 26 (as stated in the office action of 2/9/06), the prior art does not teach or render obvious continuously obtaining measured values from said reflection profiles that contain the distance of the reflector to a process terminal, using an algorithm for deciding the usability of said measured values, where the algorithm varies said scanning frequency and said pulse repetition frequency and determines the amount of interference and from the measurement of said reflected profiles or a part thereof in the combination as claimed.

Claims 18-25 and 27 depend from allowable claims 17 and 26 and are therefore also allowable.

In regard to claim 28, the prior art does not teach or render obvious a control unit for evaluating said reflection profile and generating said control signals which adjusts the phase or frequency difference between said trigger signals, said control unit including an algorithm capability for calculating interference of the reflected profile for determining measurement accuracy in the combination as claimed.

Claims 29-32 depend from allowable claim 28 and are therefore also allowable.

**Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeff Natalini whose telephone number is 571-272-2266. The examiner can normally be reached on M-F 8-5.
